INTRODUCTION & OVERVIEW

Rajasthan is a predominantly agrarian State. Water resources being scarce, agriculture is essentially rain-fed and continues to be susceptible to the vagaries of the monsoon. The geographical area of 342.24 lakh square kilometers makes this State the largest in the country.

The agricultural sector continues to play a dominant and vital role in the Indian economy. It contributes a sizeable share to the national product and absorbs a large portion of the economic activity pursued by the majority of the population. In the context of the primacy of agriculture, timely and reliable statistics on crop production are of vital importance and significance. Crop production has two major components viz. area sown and average yield rate.

The Directorate of Economics and Statistics (D.E.S) release estimates of area, production and yield in respect of principal crops of food grains, oilseeds, and other important crops. The estimates of area and yield rates assume prime importance in the entire gamut of agricultural statistics. Statistics of land use and area under crop are obtained as by-product of land revenue administration based on the land records of State.

The estimates of crop production are obtained by multiplying the area estimates with the corresponding yield estimates. The yield estimates of major crops are obtained from scientifically planned crop cutting experiments conducted under the programme of Digital General Crop Estimation Survey (DGCES). Under the DGCES, data on yield rates are collected through crop-cutting experiments using statistical techniques of random sampling.

LAND USE STATISTICS

Land Use Statistics provide valuable insights into the allocation and utilization of land across different regions. These statistics serve as key indicators for understanding land utilization, which is essential for effective planning and policy formulation. The statistics of land primarily reveals how land is utilized or allocated for various purposes in the State. It provides insights into different types and patterns of land uses such as area under agriculture and non-agricultural purposes, area under crops, area under irrigation and non-irrigation, cultivated and uncultivated land, forest cover, barren land, fallow land and other categories.

For example, tracking changes in irrigated versus non-irrigated areas helps assess the effectiveness of water resource management programs, while monitoring shifts in crop patterns can reveal the impact of agricultural policies or climate change. Similarly, understanding the expansion of non-agricultural land use supports infrastructure development and urban planning.

Land use statistics play a crucial role in analysing changes in land use and cropping patterns, assessing the impact of development programs, and promoting the efficient and sustainable use of one of our most valuable natural resources— “Land”. Additionally, these statistics are vital for informed decision-making in areas such as resource allocation, food security, land reforms and regulations, environmental management and infrastructure development. Consequently, land use data form an essential foundation for effective planning, management, policy formulation and the delivery of evidence-based policy advice.

Land Use Statistics are compiled as a part of the land records maintained by the revenue agency (Board of Revenue, Rajasthan). These statistics are collected through complete enumeration.

The land use pattern during 2022-23 and 2023-24 is presented in the following table:

Distribution of Land Use

Reporting Area for Land Utilization:

The reporting area represents the geographical extent for which data on land use classification is available. Specifically, it is the area delineated by village records, as maintained by revenue officials. This area is then classified into nine distinct land use categories.

Forests:

Forests represent all actually forested areas including all land classified as forests under any legal enactment dealing with forests or administered as forests, whether state owned or private and whether wooded or maintained as potential forest land. The forest area of the State during 2023-24 is 27.86 lakh hectares accounting for 8.13 percent of the total reporting area of the State, against 27.73 lakh hectare in 2022-23, recording an increase of 0.47 percent.

Land put to Non-Agricultural Uses:

This category includes all land occupied by buildings, roads, pathways, social forests, bus stands and railways, as well as underwater areas such as rivers, canals, marshes, waterlogged areas and other non-agricultural land uses. The area under this category is 20.33 lakh hectares accounting for 5.93 percent of the total reporting area in the State during 2023-24 as against 20.28 lakh hectare in 2022-23, recording an increase of 0.25 percent.

Barren and Un-culturable Land:

This category covers all barren and un-culturable land, such as mountains, deserts and hills. Land that cannot be brought under cultivation except at a high cost is classified as uncultivable land. An area of 23.60 lakh hectares falls under Barren and Uncultivable Land, representing 6.88 percent of the state's total reporting area in 2023-24.

Permanent Pastures and other Grazing Land:

This category covers all grazing land, including permanent pastures and meadows. Village common grazing lands are also included. An area of 16.50 lakh hectares, representing 4.82 percent of the State's total reporting

area in 2023-24, is classified as permanent pastures and other grazing land.

Miscellaneous Tree Crops and Groves not including in the Net Area Sown:

This category includes all cultivable land not included in the net area sown but used for agricultural purposes. Land under casuarina trees, thatching grass, bamboo bushes and other groves for fuel etc., which are not included under orchards shall be included under this category. An area of 0.39 lakh hectares falls under this category, representing 0.11 percent of the State's total reporting area in 2023-24.

Culturable Waste land:

Culturable waste land include all lands available for cultivation whether not taken up for cultivation or taken up for once but not cultivated during the current year and last five years or more in succession for one reason or another. Such land is classified as culturable waste land. It formed 10.26 percent (35.17 lakh hectare) of the total reporting area in the State during 2023-24.

Fallow lands other than current fallow:

This category includes all lands, that were taken up for cultivation but are temporarily out of cultivation for a period of not less than a year and not more than five years. The extent under this category was 19.61 lakh hectares, which is 5.72 percent of the total reporting area in the State during 2023-24.

Current Fallow:

This class comprises of cropped areas, that are kept fallow during the current year. If any seeded area is not cropped in the current year, it may be treated as current fallow. The area under current fallow during 2023-24 was 17.30 lakh hectares as against 15.02 lakh hectares in 2022-23, showing an increase of 15.18 percent.

Gross Area Sown:

Gross area sown presents the total area cultivated under all food and non-food crops, including the area sown more than once during the agricultural year. The gross area sown or gross cropped area during 2023-24 is 276.96 lakh hectares as against 281.71 lakh hectares in 2022-23, recording a decrease of 1.69 percent.

Net Area Sown:

Net area sown represents the total area sown with crops and orchards, counting area sown more than once in the same year once only. The Net Area Sown during 2023-24 was 181.98 lakh hectares which represent 53.10 percent of total reporting area as against 184.23 lakh hectares in 2022-23 showing a decrease of 1.22 percent.

Area Sown More Than Once:

The area on which crops were cultivated more than once during the agricultural year 2023-24 was 94.98 lakh hectares or 27.71 percent of the total reporting area in the State.

Irrigation by Sources:

Irrigation is the artificial application of water to the soil for the growth of plants. Water is an important determinant factor for the production of crops in the agricultural sector. Intensive and extensive cultivation of land depend mainly on the availability of water. The main sources of irrigation in Rajasthan are canals, tanks, tube-wells and wells. The net area irrigated by all sources during 2023-24 was 95.47 lakh hectares as against 95.00 lakh hectares in 2022-23, showing an increase of 0.49 percent. The net irrigated area during 2023-24 constituted 52.46 percent of net area sown in the State. Bikaner District is at the top with 6.66 lakh hectare net irrigated area sown. However the highest percentage of the net area irrigated to the net area sown was recorded in Kota District with 99.11 percent whereas the lowest percentage was recorded in the Balotara

District with 8.02 percent. The following table shows the Net irrigated area of the year 2023-24 by various sources compared with year 2022-23.

The net area irrigated by open wells, tube-wells and canals together account for 92.78 lakh hectare (about 97.17 percent of the total net area irrigated) in 2023-24. Gross area irrigated includes the net area sown and the area irrigated more than once. Gross area irrigated by all sources during 2023-24 is 129.60 lakh hectares as against 125.83 lakh hectare during 2022-23 registering an increase of 3.77 lakh hectare.

AREA IRRIGATED UNDER DIFFERENT CROPS:

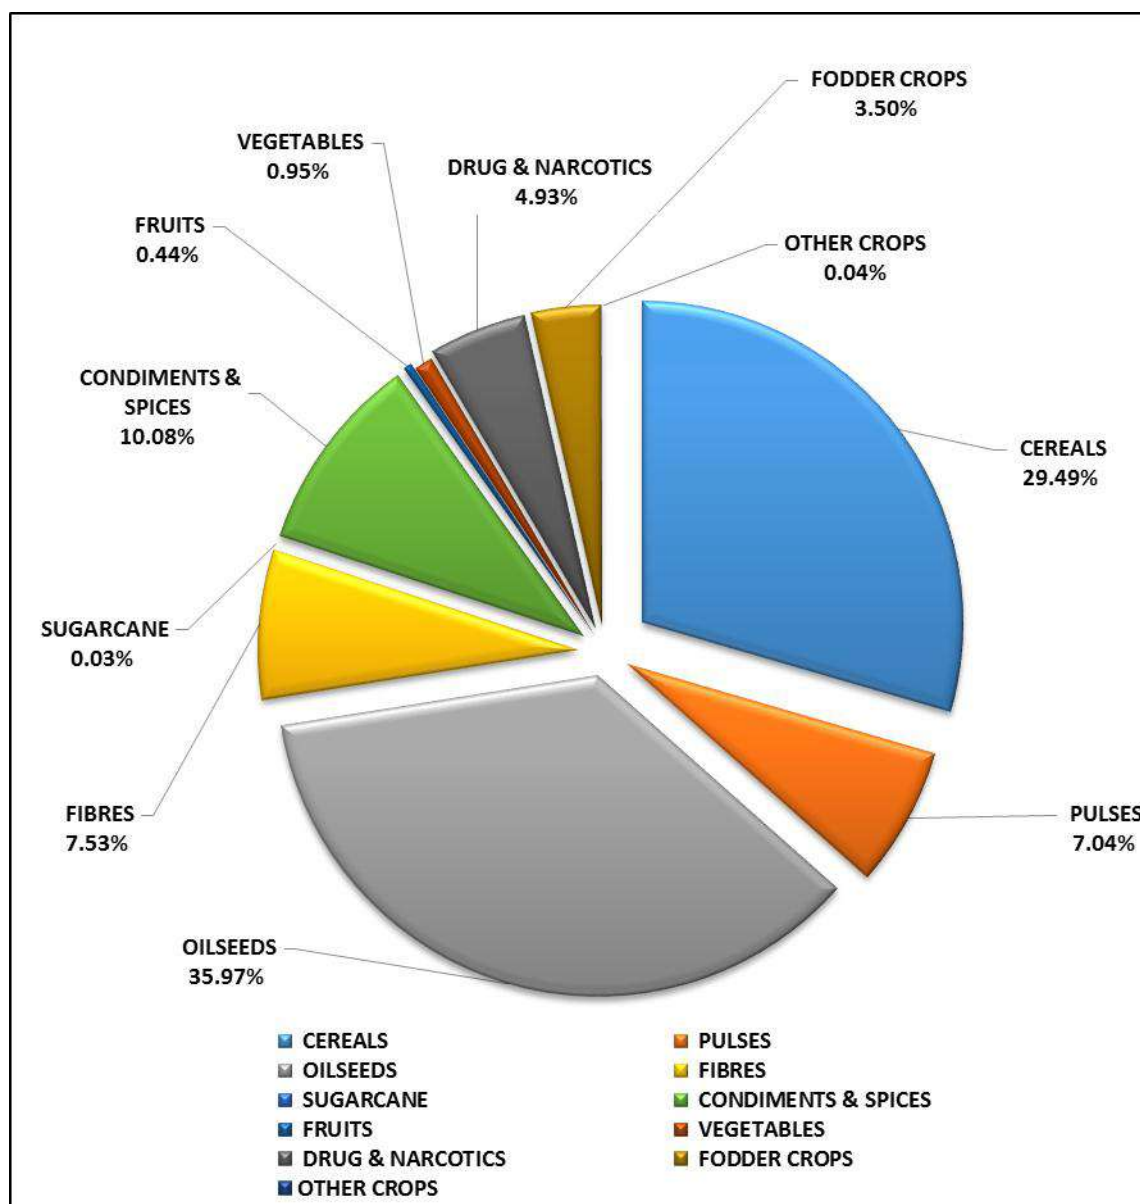

Out of total irrigated area, 28.67 percent under rape & mustard, 23.89 percent is under wheat and 7.53 percent under cotton. The share of principal crops of the gross irrigated area are shown in the State during 2022-23 and 2023-24 in the following table:

CROPPING PATTERN:

Cropping pattern refers to the proportionate area under different crops during an agricultural year. Cereals and pulses constitute food grain crops. In Rajasthan, bajra in kharif and wheat in rabi season are the major food grain crops. Non-food crops constitute oilseed, fibers, tobacco, dyes, fodder crops. The gross cropped area under all crops decreased to 276.96 lakh hectares during 2023-24 from 281.71 lakh hectares in 2022-23, showing a decrease of 1.69 percent. The following table shows the cropping pattern in

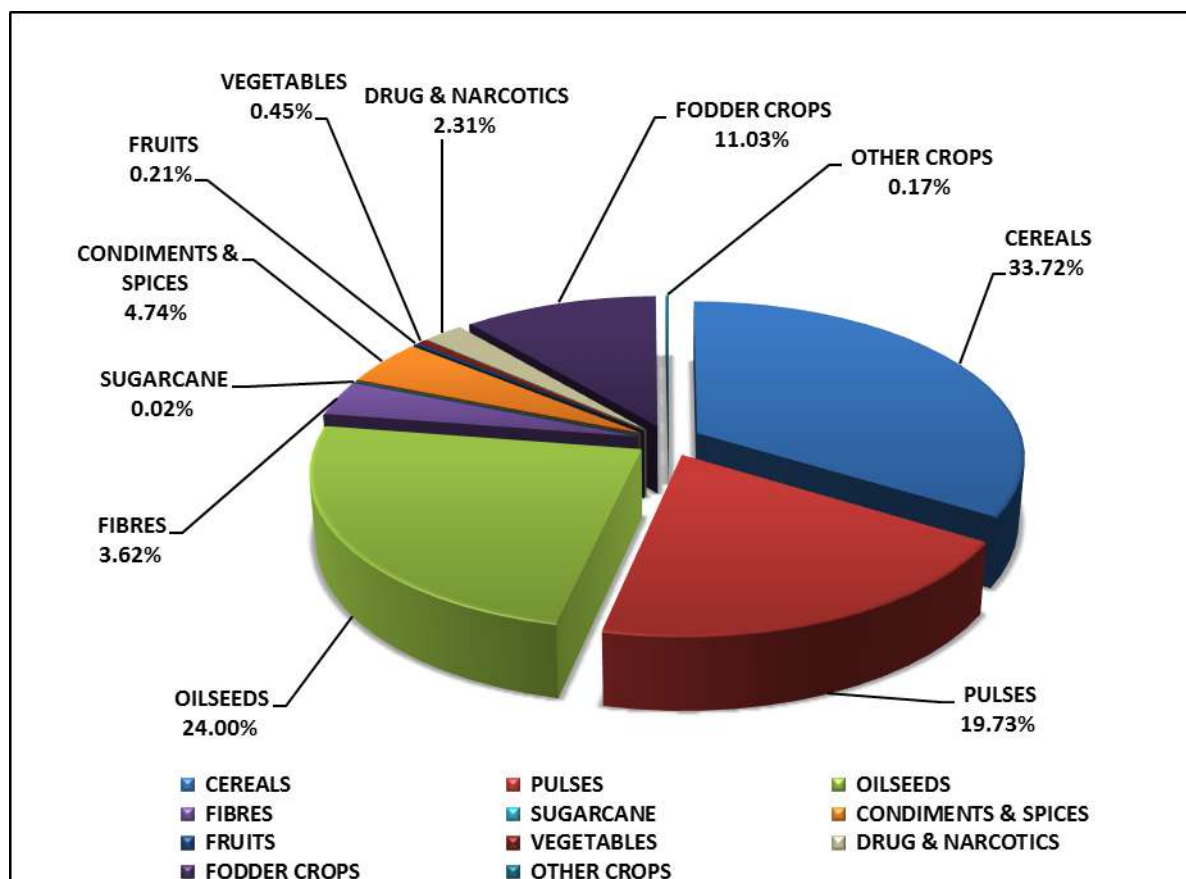

the State during 2022-23 and 2023-24 besides indicating relative share of area under principal crops to total cropped area.

AREA, PRODUCTION AND PRODUCTIVITY:

Factors such as monsoon behavior, rainfall, irrigation, fertility of land, application of fertilizers, climate conditions play an important role in State. Out of 276.96 lakh hectare of total cropped area during 2023-24, 148.02 lakh hectare or 53.45 percent was accounted for food grain crops viz., Rice, Jowar, Bajra, Maize, Wheat, Barley, Small Millets, Tur, Gram and other

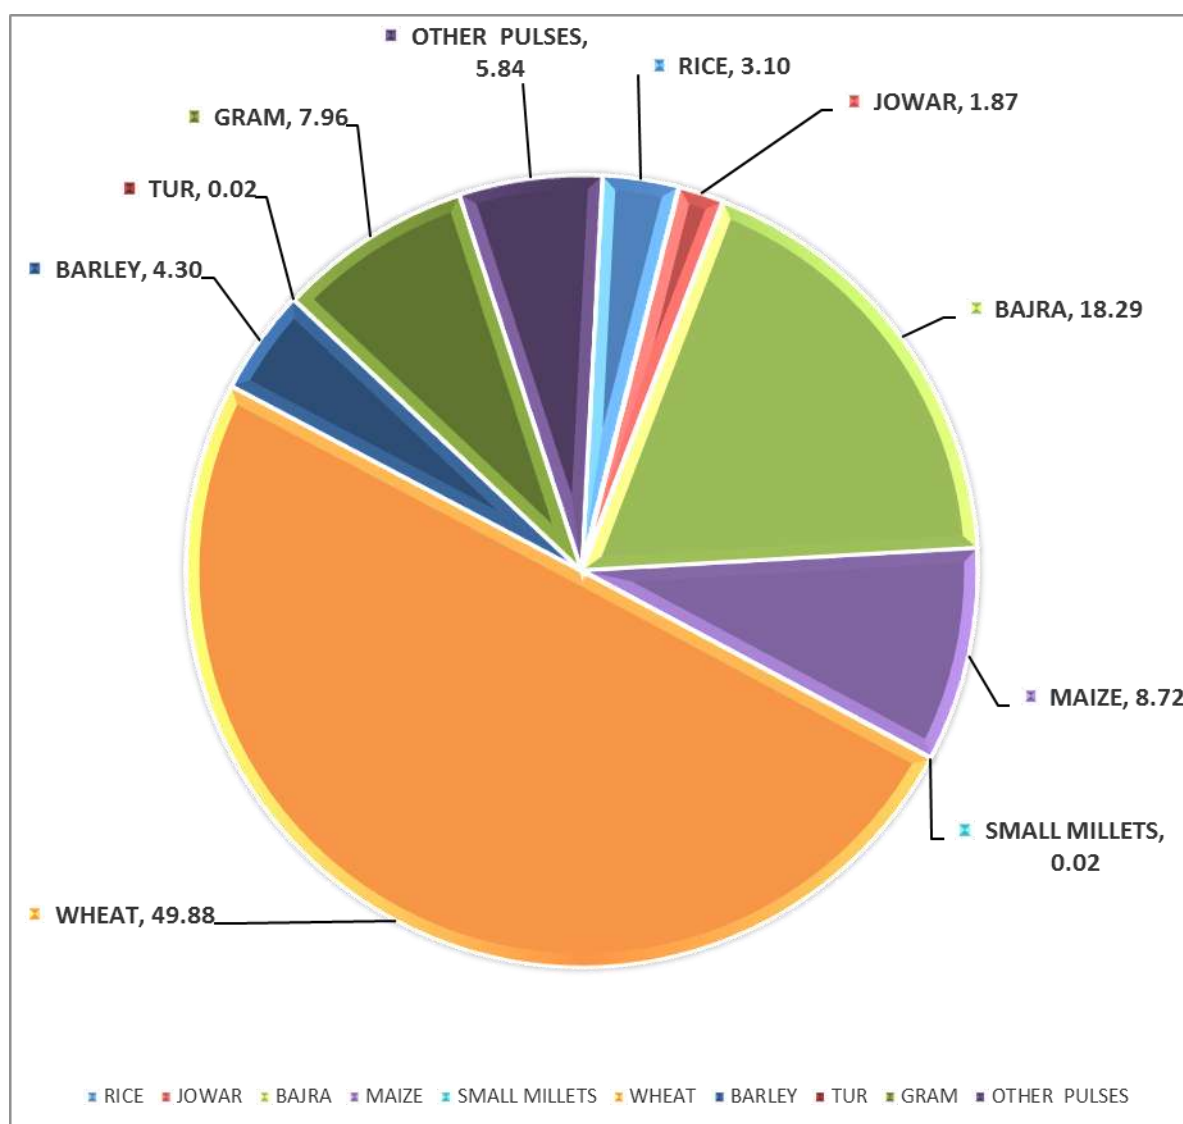

pulses. The area under cereals is 93.39 lakh hectares and for pulses, it is 54.64 lakh hectares. The crop- wise production is given during the year 2022-23 and 2023-24 in the table below:

During the year 2023-24 the production of food grain was 240.93 lakh M.T. as against 252.80 lakh M.T. in 2022-23. Wheat (49.88 percent) and Bajra (18.29 percent) are major component of the total food grain production in the State (as shown in the chart below).

COMPONENTS OF FOODGRAINS IN 2023-24

Area statistics are collected on complete enumeration basis. The second most important component of production statistics is yield rate. The yield estimates of major crops are obtained through analysis of scientifically designed crop cutting experiments (CCE).

During 2023-24, 134404 such experiments were planned. At present more than 90% of the production of food grain is estimated on the basis of yield rates obtained from the CCE'S.

The primary objective of CCE's is to obtain fairly reliable estimates of average yield of principal food & non food crops for each district which are important from the point of view of crop production. The estimates of yield

rates thus arrived at are generally adopted from the purposes of planning, policy formulation and implementation. The CCE's consist of identification and marking of experimental plots of a specified size and shape in the selected field on the principle of random sampling, threshing the produce & recording of the harvested produce for determining the percentage recovery of dry grains or the marketable form of the produce.

Crop wise details of experiments planned, experiments analyzed and yield rate under CCE's during 2023-24 are given in following table.

Rainfall:

Rainfall is one of the dominant factors responsible for crop Production. The prime source of water in the State is confined only to 3 to 4 months under south-west monsoon. The behavior of monsoon in Rajasthan is usually erratic and uncertain. Its erratic behavior has been presented in the chart as below. The weather and rainfall can be set in motion favorable or unfavorable factors which considerably influence the harvest from the fields. During the year 2023–24, an average rainfall of 662.8 mm was recorded against the normal rainfall of 575.1 mm, showing an increase of 15.25%. The rainfall trend over the last five years is presented in the table and chart below:-
